

Research Scientist in Chemistry permanent contract (M/F)

Edelris is a leading CRO in drug discovery, providing expert and innovative services in organic chemistry, biochemistry, medicinal chemistry and analytical chemistry.

Our clients are big Pharma or Biotech, mainly based in the US and Europe, and come to us to accelerate their early drug discovery, thanks to our ability to explore new chemical spaces and propose differentiating scientific solutions. We provide innovative services, high-value and high-quality products, which support and create value for our clients in their programs from hit-generation to lead-optimization.

Come and choose to become part of a dynamic, ambitious, yet human-scale company with a strong commercial and technological development globally. This is an opportunity to work with highly committed colleagues in a scientific, creative and dynamic environment.

Missions

- You will lead a project team, and contribute to the achievement of its objectives under the supervision of the Unit Manager
- You will carry out research and development work, from the design of target molecules to the design of synthesis routes and their implementation.
- You will provide strategic and scientific leadership for projects and their implementation
- You will be responsible for good communication with clients and will ensure regular reporting of the scientific progress of the project
- You will lead a project team using project management tools and databases.
- You will carry out scientific and technological monitoring
- You will demonstrate creativity and inventiveness in your field of activity and propose process improvements according to defined criteria
- You will apply and encourage the application of safety, hygiene, environmental and confidentiality guidelines within the company

Required skills:

- Scientific expertise in organic chemistry demonstrated by your impact on previous projects. Experiences in Medicinal chemistry would be a plus.
- Good organizational skills, rigor and project management
- Ability to lead and motivate research team in project mode to achieve objectives
- Team spirit, inventiveness and good interpersonal communication
- Flexibility and quick adaptation to changing environments
- Good knowledge of R&D software (Reaxys/Scifinder, ELN, ...) and office suite
- Client-oriented and problem-solving mindset
- Excellent oral and written communication in French and English is required

Education :

- PhD in organic chemistry with 3-5 years' experience in a CRO or Pharmaceutical company.
