Data Manager
permanent contract (M/F)

Edelris is a leading CRO in drug discovery, providing expert and innovative services in organic chemistry, biochemistry, medicinal chemistry and analytical chemistry.

Our clients are big Pharma or Biotech, mainly based in the US and Europe, and come to us to accelerate their early drug discovery, thanks to our ability to explore new chemical spaces and propose differentiating scientific solutions. We provide innovative services, high-value and high-quality products, which support and create value for our clients in their programs from hit-generation to lead-optimization.

Come and choose to become part of a dynamic, ambitious, yet human-scale company with a strong commercial and technological development globally. This is an opportunity to work with highly committed colleagues in a scientific, creative and dynamic environment.

Missions

- You will develop IT tools and methods for automation and data management that meet the needs of the department and the nature of the data
- You will monitor and integrate data from various sources
- You will be responsible for data processing and preliminary analysis
- You will coordinate the processing and analysis in conjunction with the Project Leaders according to the allocated schedules
- You will centralise, organise and secure the data, in particular by integrating it into the databases developed by the R&D manager, in order to exploit it in an optimal manner
- You will apply control and validation mechanisms to ensure the traceability of data and associated results
- You will ensure data integrity according to proven procedures in the field
- You will carry out technological monitoring

Required skills:

- Knowledge of object-oriented programming languages (Python, Java, C++,...)
- Experience working with a range of databases (SQL and NoSQL)
- Cloud skills (AWS)
- Good command of IT tools (Pack Office)
- Excellent oral and written communication skills, organisational skills and proven ability to work independently and in a team.
- Good command of English
- Autonomy and initiative
- Good interpersonal skills
- Good listening skills
- Organisation/ Thoroughness
- Analysis and synthesis of information

Education :

- Engineering degree or equivalent
