

# Expanding the boundaries for your small molecule drug discovery

**Cross-fertilizing our combined experiences,  
knowledge and techniques, together we break  
through to successful solutions for you.**

A long history and track record in generating and optimizing hits for your targets and solving stubborn chemistry challenges is thanks in large part to you. Your experiences spark original ideas. Your proficiency drives our collaboration. Your trust ensures our responsibility. Together, we persevere in exploring and imagining the new chemical space.

## Transparent Answers to Make Your Next Big Decision

Your scientific problems and challenges concern microscopic items: a protein, target or molecule. Behind these are much larger ambitions – discovering a new solution first, and one that is first in class. Clear answers are required to guide your next decision. Solutions that are speedily and efficiently found, at a budget you have control over..

## Chemistry Pioneers and Science Expert Peers

At Edelris, our scientific culture encompasses progressive technique and excellence in science. Our Keymical Space™ is our unique small molecule collection, with two million compounds – the largest reported screening collection – that don't exist elsewhere and ensure intellectual property potential. Create a custom library. Screen for a hit with our innovative AS-MS technology and Edelris Discovery Engine (EDEN). Optimize a lead. An impurity? Analytical chemistry pinpoints it efficiently.

These scientific manipulations are amplified by our team of scientists, 60% of whom have a PhD. Your problems ignite our curiosity and fire our imagination. We have unique methods for identifying how to approach them. We analyze and discuss together. You can redirect efforts and finetune decisions. Our constant collaboration ensures that you receive answers that meet your standards and requirements, on time and on budget.

## Four Domains of Scientific Excellence

### Compound Collections

Shape your library with tractable, natural product-like compounds from our unique Keymical Collections™. Or, let's design together your new modes!

### Screening Technologies

Propel the unique combination of AS-MS screening and a multimillion-compound proprietary Keymical Space™ towards discovering novel hits for your targets.

### Medicinal Chemistry

Advance your projects to the next stage with our creative, reliable and highly skilled team of medicinal chemists. Our track record shows our dedication to delivering solid results.

### Analytical Chemistry

Profile any impurities in your product with our meticulous analytical team, expert in providing precise and time-sensitive answers.
