

# From impurity to resolution in a dexterous analysis

## When a small problem is actually a big problem

You're in phase 3 of a clinical trial. Your drug might already be on the market. And yet something is preventing you from selling. Our technical platform and analytical chemists probe like detectives with your organic chemists to find and fix the problem, quickly and efficiently.

## End the confusion

Welcome to our analytical studio! From structural characterization to purification and analytical support, we drill down into your organic molecules, chromatograms and processes to pinpoint what, how and where your specific problem is coming from.

## Efficient detective work

Using chromatography, mass spectrometry and screening, we analyze your procedure from excipients to temperature. We reproduce your process in our own lab to better interpret and analyze results. At each stage, you receive precise answers from a responsive and dedicated team.

## For an individual problem, a clear and distinct answer

We listen carefully to your description and ask detailed questions to understand at what point an impurity inserts itself into your process. Your comprehensive quote catalogues each stage of our investigative process.

When analysis begins, we meet regularly together to inform you of findings, ask further questions and explore possible solutions. Our investigation concludes with a full written report for you, and we remain available afterwards for further questions.

**At Edelris, you work with a reliable and trustworthy team of expert analytical chemists committed to interpreting, analyzing and qualifying your synthesized compounds.**

### In-house Analytical Equipment

NMR spectrometer 400MHz • LC/HRMS (orbitrap Q-exactive) systems  
HPLC & UPLC / UV / MS systems • Preparative HPLC / MS systems  
Automatic liquids handlers, reduced pressure rotavaps & weighing system

60, Avenue Rockefeller - 69008 Lyon, France - Phone: +33(0) 437 561 900
